

Put ECLAIR's precision to work through AI

AI assistance included with ECLAIR. Richer report-grounded workflows with Pro.

AI explanations and proposed changes are only as strong as the analysis and context behind them. Through the Model Context Protocol (MCP), ECLAIR AI Companion brings ECLAIR knowledge and engineering workflows into compatible AI clients.

Learn and configure ECLAIR, understand findings, formulate deviations, and work through possible corrections.

ECLAIR AI Companion

INCLUDED WITH ECLAIR

- Bring ECLAIR guidance into everyday work at no additional ECLAIR licence fee
- Consult ECLAIR manuals and product knowledge.
 - Develop and review ECLAIR configurations.
 - Explain coding rules and findings.
 - Formulate reviewable deviations and possible corrections.
 - Implement approved changes and rerun ECLAIR where the client permits.

ECLAIR AI Companion Pro

ANNUAL ADD-ON

- Add a more direct path from ECLAIR reports to focused AI-assisted work
- Everything in ECLAIR AI Companion.
 - Richer ECLAIR report context retrieved directly for the task.
 - Bounded retrieval extended to detailed report evidence.
 - Less manual context gathering in report-driven workflows.
 - Designed to reduce token use in detailed investigations.

1-MONTH FREE TRIAL

Compare Companion and Companion Pro

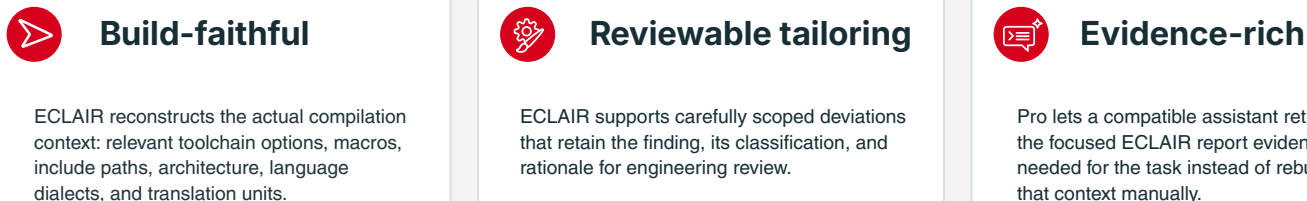

Both options put ECLAIR knowledge to work. Pro changes how directly the assistant obtains detailed report evidence.

CAPABILITY	ECLAIR AI COMPANION	ECLAIR AI COMPANION PRO
ECLAIR guidance	Consult manuals and apply product knowledge	Everything in Companion
Configuration work	Develop and review ECLAIR configurations	Everything in Companion
Findings and rules	Explain using ECLAIR knowledge and workflow context	Add richer report context retrieved directly from ECLAIR
Deviations and corrections	Develop reviewable proposals	Ground proposals in directly retrieved report evidence
Report investigation	Work with report context available in the workflow	Obtain the focused report evidence needed for the investigation directly
Approved changes	Supported where the client permits; engineer approval required	The same capabilities, with richer report grounding
Retrieval approach	Progressive, bounded retrieval of permitted context	The same approach, extended to detailed report evidence
Commercial model	Included at no additional ECLAIR licence fee	Annual add-on

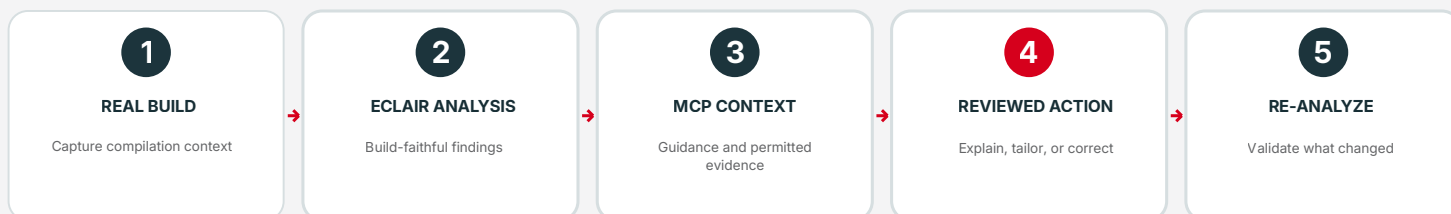

Pro is designed to reduce manual context gathering and token use in detailed report investigations. Actual use varies by task, client, model, and supplied context.

ECLAIR depth behind the AI you choose

ECLAIR AI Companion is not a generic remediation layer. It makes ECLAIR's build-faithful analysis, precise compliance mechanisms, and reviewable evidence easier to use.

From analysis to reviewed action

Engineers retain authority

ECLAIR remains the source of analysis evidence. The AI assistant helps engineers navigate that evidence, formulate options, and carry out approved work; it does not make compliance decisions.

- Engineers review deviations and source changes.
- Re-analysis validates what an approved action changed.
- ECLAIR platform certification does not apply to generated AI output.

About 200% higher productivity

In repeated experiments covering deviation formulation and proposed and implemented code changes, BUGSENG experienced roughly three times the output for the same effort. Results vary by project, task, model, and client.

THIRD-PARTY AI COSTS

AI-client, model, service, and token charges are separate.

Availability and licensing

ECLAIR AI Companion

Included with ECLAIR at no additional ECLAIR licence fee.

ECLAIR AI Companion Pro

Available only as an annual add-on; no indefinite-term Pro entitlement is offered.

- With annual ECLAIR licences, Pro is aligned with and cannot extend beyond the underlying term.
- With indefinite-term ECLAIR licences, Pro requires current maintenance and is purchased and renewed with that maintenance.
- Maintenance may be renewed without Pro; Pro cannot be renewed without the associated maintenance.
- If Pro is not renewed, Companion continues with its included capabilities.

Start with Companion. Go further with Pro.

Pro is included in full trial licenses: try it for free for a month.
