

Developing high-quality software is tough. ECLAIR is designed to help development, QA, and safety teams reach their quality goals.

ECLAIR Qualification Service

With the ECLAIR qualification service, BUGSENG highly-qualified personnel join forces with customers' safety teams in taking care of ECLAIR qualification following the prescriptions of functional safety standards. We will reproduce your ECLAIR operational environment and particular ECLAIR use case, and provide you with the corresponding *ECLAIR Qualification Report* along with all the required supporting evidence to justify the use of ECLAIR in your project.

1 Highlights

- The service supports several functional safety standards: CENELEC EN 50128 (railway), ECSS-Q-ST-80C (space), IEC 61508 (industrial), IEC 62304 (medical), ISO 26262 (automotive), RTCA DO-178C/DO-330 (aerospace).
- ECLAIR validation for MISRA C:2012 performed with third-party, validated test suites.
- ECLAIR validation for the computation of HIS and other source code metrics as well as all other qualifiable ECLAIR features.
- **No stress:** choose the ECLAIR qualification service and get a discount if you later buy an ECLAIR qualification kit; if you already have an ECLAIR qualification kit, you can still buy the ECLAIR qualification services at a discounted price.

2 Documents Provided

ECLAIR Qualification Report Tool qualification report including:

- Definition of the ECLAIR use-case for which the validation holds.
- Description of the qualification procedure.
- Description of tool qualification requirements set forth by the applicable functional safety standard and how these requirements correspond to the used qualification procedure.
- Full listing of the test results.
- Description of any tool failures that may have been found.
- Description of how each of these tool failures may be mitigated.

ECLAIR Safety Manual Contains all you need to know on the use of ECLAIR for the development of safety-related systems.

3 Solid Sands Test Suites

Solid Sands, the makers of the renowned *SuperTest* compiler test and validation suite for C and C++ compilers, also produces test suites for MISRA C:2012. Solid Sands MISRA suites contain two types of tests:

1. The *t-tests* are meant to fully conform with the MISRA guidelines and should not trigger any diagnostics in the MISRA checking software; this class of tests is useful to catch the presence of unwanted false positives.
2. The *x-tests* have been designed to contain a violation of each specific MISRA guidelines; these are helpful to prove the correctness and comprehensiveness of the ECLAIR tool to an accredited certification body.

4 ECLAIR Qualification Service vs Qualification Kits

ECLAIR has been designed, at the outset, to be qualifiable to the strictest requirements of functional safety standards. If you are undecided about the choice between a qualification kit and the qualification service, here are the factors you should take into account.

ECLAIR Qualification Kit is for you if	ECLAIR Qualification Service is for you if
ECLAIR qualification will be a recurring task for your company	ECLAIR qualification may be a one-time task for your company
You have both suitably qualified personnel and the time to perform the qualification in-house	You lack time or manpower (we can do the qualification for you in 10 working days)
You are willing to write the qualification report yourself (the qualification kit provides crucial guidance on how to do that properly)	You prefer not having to produce the qualification report yourself and would like us to do it properly for you
You want all the evidence of the qualification work to be in your hands, along with the ability to repeat the validation process at any time	You only need the qualification report and safety manual: all the remaining artifacts (including test cases) can remain with BUGSENG

Still undecided?

You may go for the qualification service, and get a substantial discount if you, for other projects, decide to switch to the qualification kit. And of course, starting with the qualification kit does not preclude to use the qualification service, if you later find yourself in trouble due to tight deadlines.

Do not hesitate to contact us for more information: we will be glad to consult you on the best solutions for your needs.

5 The Bigger Picture

ECLAIR is very flexible and highly configurable. It can support your software development workflow and environment, whatever they are.

ECLAIR is fit for use in mission- and safety-critical software projects: it has been designed from the outset so as to exclude configuration errors that would undermine the significance of the obtained results.

ECLAIR is developed in a rigorous way and carefully checked with extensive internal test suites (tens of thousands of test cases) and industry-standard validation suites.

ECLAIR is based on solid scientific research results and on the best practices of software development.

ECLAIR's unique features and BUGSENG's strong commitment to the customer, allow for a smooth transition to ECLAIR from any other tool.

BUGSENG's quality system has been **certified** by TÜV Italia (TÜV SÜD Group) to comply with the requirements of UNI EN ISO 9001:2015 for the "Design, development, maintenance and support of tools for software verification and validation" (IAF 33).

BUGSENG is an **Arm's Functional Safety Partner**. Arm's Functional Safety Partnership Program promotes partners who can reliably support their customers with industry leading functional safety products and services.
